Classical Field Theory, Winter 2025/26

Lecture: Dr. Falk Hassler, falk.hassler@uwr.edu.pl

Tutorial: Dr. Falk Hassler, falk.hassler@uwr.edu.pl, and

M.Sc. Achilles Gitsis, achilleas.gitsis@uwr.edu.pl

6. Four-velocity & four-acceleration (15 points)

To be discussed on Wednesday, 19th November, 2025 in the tutorial. Please indicate your preferences until Friday, 14/11/2025, 21:00:00 on the website.

Exercise 6.1: Four-velocity

The four-velocity is defined as

$$u^{\mu} = \frac{dx^{\mu}}{d\tau} = \gamma(v)(c, \vec{v}), \quad \gamma(v) = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}},$$

where $c^{2}d\tau^{2} = \eta_{\mu\nu}x^{\mu}x^{\nu} = c^{2}dt^{2} - d\vec{x}^{2}$

a) (3 points) Prove that the velocity composition formula is

$$v' = \frac{v - \nu}{1 - \frac{v\nu}{c^2}}.\tag{1}$$

Hint: Do so by applying a special Lorentz transformation to u^{μ} . Assume also 1D motion.

b) (2 points) Check whether (1) is associative.

Exercise 6.2: Four-acceleration

The four acceleration is defined as

$$w^{\mu} = \frac{du^{\mu}}{d\tau}.$$

a) (4 points) Express w^{μ} in terms of the acceleration $a^{i} = \frac{du^{i}}{dt}$ i.e. prove

$$w^{\mu} = \gamma^{2}(v) \left(\gamma^{2}(v) \frac{\vec{v} \cdot \vec{a}}{c}, \vec{a} + \gamma^{2}(v) \frac{\vec{v} \cdot \vec{a}}{c^{2}} \vec{v} \right).$$

Hint: Keep in mind that $dt = \gamma d\tau$.

- b) (3 points) Calculate $w^{\mu}w_{\mu}$.
- c) (3 points) Calculate $w^{\mu}u_{\mu}$.
